HTP 1700 R

The HTP series sealing devices are pneumatically operated sealing presses that are not only characterised by their sturdy design, but also offer the possibility of sealing materials that require a high contact sealing pressure.

Sealing lengths of 400 mm to 3500 mm with a heating band width of 4 mm to max 40 mm are possible

Use of water-cooled sealing bars in conjunction with a cooler intended for the purpose, plus a digitally controlled impulse unit specially designed for the heating band allow high item throughput with consistent sealing results to be achieved.

Other special application can be taken into account on request..

TECHNICAL DATA

HTP 1700 R

Sealing length (mm)	1700
Sealing width (mm)	max. 10
Distance between sealing bars (mm)	100
Film thickness	Any thickness
Sealing cycle	Automatic
Heating temperature	Adjustable
Connection	400V trifase/50-60 Hz
Weight	Kg. 350
Degrees protection	IP 54
Dimension (mm)	2800x1670x750h
Material	Any types of thermoplastic films

Technical alteration without prior notice
