PS 300 C

Sealer model PS 300 C is suitable for closing plastic bags or produce bags from tubular roll. The operator moves the film from the roll under sealing bar up to the length of the bag he needs to produce.

The sealing cycle is starting when the operator push down the sealing jaw. While the device is sealing the operator slides the cutter along the sealing arm thus separating the bag.

When the bag has been filled with the product it can seal it by means of the same sealer, cutting off any exceeding part by means of the sliding knife

TECHNICAL DATA

Seal seam length (mm)	300
Seal seam width (mm)	2
Seal thickness (mm)	2x0,10
Connection:	230V/50 Hz
Power:	400W
Dimension (mm)	490x90x180h
Material:	Poyiethylene PEHD, PELD, PVC

Technical alteration without prior notice
